

Time saving solution for ATEX 137 inspections

Innovative, handheld, secure, scalable software creating paperless inspections through one-touch data entry forms.

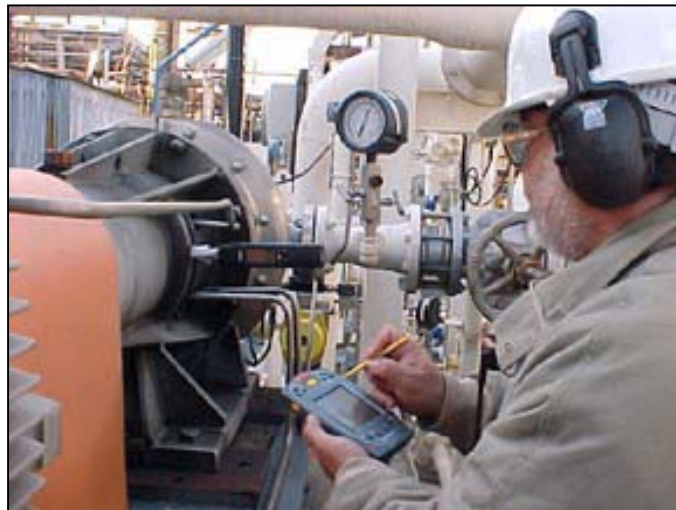

Key features

Up-to-date asset register

Full audit and reporting

Option to interface to maintenance systems

Abnormalities immediately reported

“I estimate a reduction in Contractor man hours of around 40% to complete the tasks involved” Steve Williams, Warwick International

Devising the solution, delivering the promise

Time saving solution for ATEX 137 inspections

With the compliance deadline of 30th June 2006 rapidly approaching, commentators are suggesting that only 20% of plants in the UK have taken steps to ensure they meet the requirements.

IndEx will give you a head start by helping you prove that your working environments are operated and maintained with due regard for safety.

A screenshot of a software window titled "New Form - Ex 'i' Close". The window contains a form for an inspection. The title is "Ex 'i' Close in accordance with BS5345 IEC 60079-17". There are fields for "Tag Number" (AE201025), "Type Description" (Sand Probe), "Manufacturer" (Cosasco), and "Model Number" (50-141-2-12-S31083-4). Below these are three sections of checklist items, each with a dropdown menu for the status: "A - Apparatus" (8 items, mostly "Pass"), "B - Installation" (4 items, one "Fail"), and "C - Environment" (2 items, both "Pass").

Missed inspections are instantly highlighted in calendar view

A screenshot of the IndEx software interface. On the left is a calendar for January and February 2003. The calendar shows inspection dates with colored indicators: yellow for scheduled, green for completed, and red for missed. A red dot is visible on January 27th. On the right is a "Make/Edit Schedule" dialog box. It shows a table of inspection records with columns for Description, Status, Scheduled Date, Created Date, Form, Folder / Asset, and User Name. The "Area B inspection" row is highlighted in red, indicating it is missed. The dialog also includes fields for Description, Appointment Filter, Date Range, and Recurrence options.

IndEx contains pre-configured close, visual and detailed inspection forms for rapid installation and ease of use
